

GRIGNON SCORING KNIFE

METAL DETECTABLE BAKERY SCORING KNIFE

PAGE 1 of 2

Product Specifications

KN1271234MB | Revised March 2015

Product Description: This highly ergonomic ambidextrous scoring knife sits snugly into the hand, making it comfortable to hold and easy to use. Both the handle and blade are made from food safe metal detectable plastic, with a total weight of only 5 grams.

The easy to change, flexible, metal detectable plastic blade is designed for curved scoring of bread and baguettes, avoiding unnecessary cutting risks but remaining plenty sharp enough to score dough. The blade is impeccable for making fast, clean slashes on dough prior to baking, allowing for deep cuts giving better crust and creative opportunities, for professional artisan bakers.

The GRIGNON is supplied with one detectable plastic blade, replacement blades are available from BST in packs of 10.

Product Code: KN1271234MB

Product Colour: Blue Handle / Purple Blade

Pack Size: 1 Knife

Overall Knife Size: 6"

Product Advantages:

- ✓ Detectable by conventional metal detection systems
- ✓ Highly visible bright body colours for easy visual identification
- ✓ EU food contact approved
- ✓ Displays all due diligence in preventing foreign body contamination.
- ✓ Can be used to form part of HACCP and BRC procedures
- ✓ Ambidextrous, ergonomic & ultra light design

Replacement Blades:

Blade Description	Blade Size (mm)	Pack Quantity	Order Code
Grignon Blade	Food Safe Metal Detectable Plastic	10 Pack	KN2358MP

Metal Detectability

The handle and blade plastic of the GRIGNON scoring knife contains an evenly distributed metal detectable additive, making the plastic detectable by correctly calibrated metal detection systems. BST recommend that all our products be thoroughly tested on your metal detection systems by a trained and certified professional. The detectability of these materials will vary based upon the metal detection systems being used and their calibration. All components of this safety knife are manufactured from metal detectable polymers or stainless steel, making the product fully metal detectable. Detectability performance will vary based on, but not limited to the following factors:

- Detector Calibration Levels
- Food Product Type (E.g. Wet, Dry, Frozen, Liquid)
- Aperture Dimensions
- Contaminant Orientation

For this reason BST recommend that all our products be thoroughly tested on your metal detection systems by a trained and certified professional. It may be the case that your equipment needs to be recalibrated in order to reliably detect this product and its fragments. Such a professional should be available by contacting the manufacturer of your metal detection system.
